

Design and Construction of Well 39-3

This project will consist of drilling and equipping of a new groundwater well in the Los Angeles County unincorporated community of Rock Creek (Well 39-3). The new well will replace an existing well (Well 39-1) within the same site. The new well will improve the quality and the reliability of the Rock Creek water supply system. This project is currently in the early design stages and is scheduled to complete construction by late 2011.
